

OMRON

**Model H3CR -A
SOLID-STATE TIMER**
UK/USA INSTRUCTION SHEET
D Bedienungsanleitung
F Manuel d'instructions

Thank you for purchasing this OMRON product. This manual primarily describes precautions required in installing and wiring the timer. Before operating the product, read this manual thoroughly to acquire sufficient knowledge of the product. Keep this manual for future reference.

Bitte lesen Sie diese Betriebsanleitung sorgfältig durch, bevor Sie mit dem Gerät arbeiten.

Avant d'utiliser ce produit, veuillez, s'il vous plaît, lire attentivement ce manuel pour vous familiariser avec le produit.

OMRON Corporation

1P

0696882-6C

**UK/USA Nomenclature**

Power indicator
Output indicator
Rated time selector
Time unit selector
Setting dial (setting time value)
Operation mode selector

Note: If pointer is turned counterclockwise until overranged, instantaneous output will be issued. (zero point instantaneous operation)

D Bezeichnungen der Teile

Spannungsversorgungsanzeige
Ausgangsanzeige
Zeitbereichschalter
Zeiteinheitwahlschalter
Einstellscheibe (eigestellte Zeitdauer)
Betriebsartwahlschalter

Hinweis: Sofortausgang (Sofortbetrieb) kann durch Drehung der Einstellscheibe auf 0 eingestellt werden.

Voyant d'alimentation en courant
Voyant de puissance de sortie
 Sélecteur de temps nominal
 Sélecteur de temps
 Cadran de réglage (réglage du temps)
 Sélecteur du mode de fonctionnement

Remarque : Use sortie instantanée est possible en plaçant le cadran sur le réglage 0 (mode sortie instantanée).

- Temporarily stops timing operation. Open terminal ④ when not used.
- S : Start input (Always connect)** Short-circuit terminal ③ with power-on start and power reset operation.
- R : Reset input** External reset input. Open terminal ⑦ when not used.
- G : Gate input** Operating power Contact input signal connection Solid-state input signal connection

- G : Toreingang (Sockellekette 5)** Hält den Zeitzählauf an. Wird diese Funktion nicht benötigt, braucht der Toreingang nicht angeschlossen werden.
- S : Starteingang (Sockellekette 6)** Bei der Funktion Spannungsstart / Spannungsstop muss der Starteingang angeschlossen sein.
- R : Rücksetzeingang (Sockellekette 7)** Wird diese Funktion nicht benötigt, braucht der externe Rücksetzeingang nicht angeschlossen werden.
- G : Toreingang (Sockellekette 5)** Halt die temporäre Zeitzählzeit.
- S : Starteingang (Sockellekette 6)** Bei der Funktion Spannungsstart / Spannungsstop muss der Starteingang angeschlossen sein.
- R : Rücksetzeingang (Sockellekette 7)** Wird diese Funktion nicht benötigt, braucht der externe Rücksetzeingang nicht angeschlossen werden.
- G : Toreingang (Sockellekette 5)** Hält die Zeitzählzeit.
- S : Starteingang (Sockellekette 6)** Bei der Funktion Spannungsstart / Spannungsstop muss der Starteingang angeschlossen sein.
- R : Rücksetzeingang (Sockellekette 7)** Wird diese Funktion nicht benötigt, braucht der externe Rücksetzeingang nicht angeschlossen werden.

- G : Toreingang (Sockellekette 5)** Setzt das Zeitzählrelais wieder auf Null.
- S : Starteingang (Sockellekette 6)** Setzt das Zeitzählrelais wieder auf Null.
- R : Rücksetzeingang (Sockellekette 7)** Setzt das Zeitzählrelais wieder auf Null.
- G : Toreingang (Sockellekette 5)** Setzt das Zeitzählrelais wieder auf Null.
- S : Starteingang (Sockellekette 6)** Setzt das Zeitzählrelais wieder auf Null.
- R : Rücksetzeingang (Sockellekette 7)** Setzt das Zeitzählrelais wieder auf Null.

Precautions for Safe Use

Please comply strictly with the following instructions which are intended to ensure safe operation of the controller.

(1) For correct use, do not subject the timer to the following conditions:

- Dramatic temperature fluctuations
- High humidity or where condensation may occur
- Corrosive gas or dusty environments
- Where there is danger of splashing of water, oil or any chemicals
- Where explosive or flammable gases may be present

(2) Load power supply

- Make sure that the load power supply is within the rating.

(3) Handling

- Do not disassemble, modify or repair the product.

(4) Power supply

- Make sure the proper product is specified for the application.

(5) Wire terminals

- Locate the timer, input devices and input signal wiring as far as possible from noise sources and conductors carrying high voltage.

(6) Input power supply

- Be sure to use the Timer at ambient temperature of 10 to 55 °C and ambient humidity (relative humidity) of 35 to 85 %.

(7) Paint thinner

- Do not use paint thinner or the equivalent. Use standard grade alcohol to clean the product.

(8) Timer

- Do not change the time unit, time range or operation mode while the Timer is in operation; otherwise malfunction could result. Be sure to turn off the power before making such changes.

(9) Line connection

- When connecting the contact or transistor for external input signal to the input terminals of the timer, pay attention to the following points to prevent short-circuiting of the transformerless power supply.

When simultaneously inputting signals to more than one timer from the same input contact or transistor, the phases of the power supplies must agree.* 1) If the power supplies are not in phase, short-circuit the power supply terminals.

For the power supply of an input device, use an isolation transformer.* 2), of which the primary and secondary windings are mutually isolated and the secondary winding is not grounded. I * 3)

The appropriate input terminals 5 (Gate input), 6 (Start input) or 7 (Reset input) uses power supply terminal 2 as a common terminal.

Terminals 5, 6, 7 and 10 must be connected to ground.

Do not apply voltage to any other terminals, and do not connect terminals 5, 6, 7 to terminal 10, or to any terminal other than terminal 2. Otherwise the internal circuit of the timer may be damaged.

* 5 Do not connect a relay or other inductive load across the input supply points (terminals 2 and 10), or the internal circuit of the timer.

(10) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(12) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(13) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(14) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(15) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(16) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(17) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(18) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(19) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(20) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(21) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(22) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(23) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(24) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(25) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(26) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(27) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(28) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(29) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(30) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(31) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(32) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(33) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(34) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(35) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(36) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(37) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(38) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(39) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(40) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(41) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(42) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(43) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(44) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(45) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(46) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(47) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(48) Please do not exceed the voltage rating marked on the timer.

If voltage other than the rated voltage is applied, the internal components may be damaged.

(49) Please refer to the diagram shown on the left. () Interlock the power to the timer with a relay so that the timer will not be left in a time-up condition for long periods. Leaving the timer in a time-up condition for a month or longer, especially in places with high temperatures, may result in deterioration to internal parts, such as an electrolytic capacitor.

(50) Power supply connection

Use a DC power supply having a ripple factor of 20% or less and a mean voltage that is within the rated operating voltage marked on the timer.

Make sure that the supply voltage is applied to the timer all at once, using contacts such as of a switch or relay. Otherwise, the timer may be able to act as a power relay or its set time may be up when it is not.

(51) Please do not exceed the voltage rating marked on the timer.
